

ABSTRACT OF THE DISCLOSURE

The content-recording apparatus comprises the display-control unit generating the signal-for-display device, based on the network connection unit acquiring the contents data via the network, the content-recording unit recording the contents data, and the content data recorded in the content-recording unit. When the content data acquired via the network by the network connection unit is recorded in the content-recording unit and is reproducible, the display-control unit generates the signal for the monitor notifying a user the reproduction of the content data.
